NAME

libinput-test - test various components of libinput itself

SYNOPSIS

libinput test [--help] *<feature> [<args>]*

DESCRIPTION

The **libinput test** tool runs tests against libinput itself. There is usually no need for a user to use this tool, it is provided for distribution vendors. **This tool was disabled at build time!**

This is a testing tool only, its output may change at any time. Do not rely on the output.

This tool may need to be run as root to have access to the /dev/input/eventX nodes and/or create /dev/uinput devices.

OPTIONS

--help   Print help

FEATURES

Tests that can be run are

libinput-test-suite(1)

Run the full test suite. This is the most complete set of tests to run in libinput.

libinput-test-utils

Run the test suite suite for internal utility functions.

LIBINPUT

Part of the **libinput(1)** suite
