NAME

    libssh2_channel_free - free all resources associated with a channel

SYNOPSIS

    #include <libssh2.h>

    int
    libssh2_channel_free(LIBSSH2_CHANNEL *channel);

DESCRIPTION

    channel - Channel stream to free.

    Release all resources associated with a channel stream. If the channel has not yet been closed with
    libssh2_channel_close(3) , it will be called automatically so that the remote end may know that it can
    safely free its own resources.

RETURN VALUE

    Return 0 on success or negative on failure. It returns LIBSSH2_ERROR_EAGAIN when it would
    otherwise block. While LIBSSH2_ERROR_EAGAIN is a negative number, it is not really a failure per
    se.

SEE ALSO
