NAME

    libssh2_session_abstract - return a pointer to a session's abstract pointer

SYNOPSIS

    #include <libssh2.h>

    void **
    libssh2_session_abstract(LIBSSH2_SESSION *session);

DESCRIPTION

    session - Session instance as returned by **libssh2_session_init_ex(3)**

    Return a pointer to where the abstract pointer provided to **libssh2_session_init_ex(3)** is stored. By
    providing a doubly de-referenced pointer, the internal storage of the session instance may be modified
    in place.

RETURN VALUE

    A pointer to session internal storage whose contents point to previously provided abstract data.
