

NAME

libssh2_sftp_shutdown - shut down an SFTP session

SYNOPSIS

```
#include <libssh2.h>
#include <libssh2_sftp.h>
```

```
int
libssh2_sftp_shutdown(LIBSSH2_SFTP *sftp);
```

DESCRIPTION

sftp - SFTP instance as returned by **libssh2_sftp_init(3)**

Destroys a previously initialized SFTP session and frees all resources associated with it.

RETURN VALUE

Return 0 on success or negative on failure. It returns LIBSSH2_ERROR_EAGAIN when it would otherwise block. While LIBSSH2_ERROR_EAGAIN is a negative number, it is not really a failure per se.
