

NAME

llvm-stress - generate random .ll files

SYNOPSIS

llvm-stress [-size=filesize] [-seed=initialseed] [-o=outfile]

DESCRIPTION

The **llvm-stress** tool is used to generate random **.ll** files that can be used to test different components of LLVM.

OPTIONS**-o filename**

Specify the output filename.

-size size

Specify the size of the generated **.ll** file.

-seed seed

Specify the seed to be used for the randomly generated instructions.

EXIT STATUS

llvm-stress returns 0.
