Name

mariadb_dyncol_exists_named - Check if column with given name exists.

Synopsis

```
enum enum_dyncol_func_result
mariadb_dyncol_exists_named(DYNAMIC_COLUMN *str,
              MYSQL_LEX_STRING *column_key);
```

Description

Checks if a column with the specified column key exists.

Parameter

- *str - Dynamic column

- *column_key - The column key to search for

Return value

Returns ER_DYNCOL_YES if a column with given key exists, ER_DYNCOL_NO if no column exists or error.
