

Name

mariadb_dyncol_exists_num - Check if column with given number exists.

Synopsis

```
enum enum_dyncol_func_result  
mariadb_dyncol_exists_num(DYNAMIC_COLUMN *str,  
                          uint column_number);
```

Description

Checks if a column with the specified column key exists.

Parameter

- ⊕ *str - Dynamic column

- ⊕ column_number - The column number to search for

Return value

Returns ER_DYNCOL_YES if a column with given number exists, ER_DYNCOL_NO if no column exists or error.
