

**Name**

mariadb\_stmt\_fetch\_fields - Returns an array of fields containing the column definitions ## Synopsis

```
#include <mysql.h>
```

```
MYSQL_FIELD *mariadb_stmt_fetch_fields(MYSQL_STMT * stmt);
```

**Description**

Returns an array of fields. Each field contains the definition for a column of the result set. If the statement doesn't have a result set a NULL pointer will be returned.

**Parameter**

⊕ stmt - A statement handle, which was previously allocated by **mysql\_stmt\_init(3)**.

**Notes**

The number of fields can be obtained by **mysql\_stmt\_field\_count(3)**

**History**

This function was added in MariaDB Connector/C 3.1.0
