NAME

    mate-screenshot - capture the screen, a window, or an user-defined area and save the snapshot image to a file.

SYNOPSIS

    mate-screenshot [**-w**] [**-a**] [**-b**] [**-B**] [**-d** *SECONDS*] [**-e** *EFFECT*] [**-i**] [**--display** *DISPLAY*]

DESCRIPTION

    mate-screenshot is a MATE utility for taking screenshots of the entire screen, a window or an user-defined area of the screen, with optional beutifying border effects.

OPTIONS

    -w, --window

        Grab the current active window instead of the entire screen.

    -a, --area

        Grab an area of the screen instead of the entire screen.

    -b, --include-border

        Include the window border within the screenshot.

    -B, --remove-border

        Remove the window border from the screenshot.

    -d, --delay=*SECONDS***,**

        Take the screenshot after the specified delay [in seconds].

    -e, --effect=*EFFECT***,**

        Add an effect to the outside of the screenshot border. *EFFECT* can be ''shadow'' (adding drop shadow), ''border'' (adding rectangular space around the screenshot) or ''none'' (no effect). Default is ''none''.

    -i, --interactive

        Interactively set options in a dialog.

    --display=*DISPLAY*

        X display to use.

    -?, -h, --help

Show a summary of the available options.

In addition, the usual GTK+ and MATE command line options apply. See the output of --help for details.
