

Name

mmroff – cross-referencing front end for GNU *roff mm* macro package

Synopsis

mmroff [-x] *groff-argument* ...

mmroff --help

mmroff --version

Description

mmroff is a simple wrapper for *groff*, used to expand cross references in *mm*; see *groff_mm(7)*. It runs *groff* with the **-mm** option twice, first with **-z** and **-rRef=1** to populate cross-reference and index files with their corresponding entries, and then again to produce the document. It also handles the inclusion of PostScript images with the **PIC** macro. Documents that do not use these features of *groff mm* (the **INITI**, **IND**, **INDP**, **INTR**, **SETR**, **GETHN**, **GETPN**, **GETR**, **GETST**, and **PIC** macros) do not require *mmroff*.

Options

--help displays a usage message, while **--version** shows version information; both exit afterward.

-x Create or update the cross-reference file and exit.

Authors

mmroff was written by Jörgen Hägg <jh@axis.se> of Lund, Sweden.
