Name
    mysql_data_seek - seeks to an offset

Synopsis

      #include <mysql.h>

      void mysql_data_seek(MYSQL_RES * result,
                 my_ulonglong offset);

Description
    The mysql_data_seek() function seeks to an arbitrary function result pointer specified by the offset in
    the result set. Returns zero on success, nonzero if an error occurred.

Parameters
    ⊕ result - a result set identifier returned by mysql_store_result().

    ⊕ offset - the field offset. Must be between zero and the total number of rows minus one
      (0..mysql_num_rows - 1).

Notes
    This function can only be used with buffered result sets obtained from the use of the
    mysql_store_result(3) function.
