Name

mysql_fetch_field_direct - Returns a pointer to a MYSQL_FIELD structure

Synopsis

```
#include <mysql.h>

MYSQL_FIELD * mysql_fetch_field_direct(MYSQL_RES * res,
                    unsigned int fieldnr);
```

Description

Returns a pointer to a MYSQL_FIELD structure which contains field information from the specified result set. ### Parameter * res - a result set identifier returned by **mysql_store_result(3)** or **mysql_use_result(3)**. * fieldnr - the field number. This value must be within the range from 0 to number of fields - 1 ### Notes * The total number of fields can be obtained by mysql_field_count()

Return value

Pointer to a MYSQL_FIELD structure or NULL if an invalid field number was specified
