

Name

mysql_free_result - Frees result set

Synopsis

```
#include <mysql.h>
```

```
void mysql_free_result(MYSQL_RES * result);
```

Description

Frees the memory associated with a result set. Returns void.

Parameters

⊕ result - a result set identifier returned by **mysql_store_result(3)** or **mysql_use_result(3)**.

Notes

- ⊕ You should always free your result set with `mysql_free_result()` as soon it's not needed anymore
- ⊕ Row values obtained by a prior **mysql_fetch_row(3)** call will become invalid after calling `mysql_free_result()`.
