Name
  mysql_get_client_version - returns client version number

Synopsis

  unsigned long mysql_get_client_version(void);

Description
  Returns a number representing the client library version. The value has the format XXYYZZ: major version * 10000 + minor version * 100 + patch version. ### Notes * To obtain a string containing the client library version use the **mysql_get_client_info(3)** function. * Note: Since MariaDB Server 10.2.6 and MariaDB Connector/C 3.0.1 the client library is bundled with server package and returns the server package version. To obtain the client version of the connector, please use the constant MARIADB_PACKAGE_VERSION_ID

Return value
  A long integer representing the client version
