

**Name**

mysql\_get\_host\_info - Returns host information

**Synopsis**

```
#include <mysql.h>
const char * mysql_get_host_info(MYSQL * mysql);
```

**Description**

Describes the type of connection in use for the connection, including the server host name. Returns a string, or NULL if the connection is not valid.

**Parameter**

- ⊕ mysql - a connection identifier, which was previously allocated by **mysql\_init(3)** and connected by **mysql\_real\_connect(3)**.

**Return value**

Returns a string, describing host information or NULL if the connection is not valid.
