

**Name**

mysql\_options4 - Used to set extra connect options and affect behavior of a connection

**Synopsis**

```
#include <mysql.h>

int mysql_options4(MYSQL * mysql,
                  enum mysql_option,
                  const void * arg1,
                  const void * arg2);
```

**Description**

Used to set extra connect options and affect behavior for a connection. This function may be called multiple times to set several options. `mysql_options()` should be called after **mysql\_init(3)**.

**Notes**

This function is deprecated, new implementations should use **mysql\_optionsv(3)** api function instead.

**Options**

An overview of the possible options can be found in the description of the **mysql\_optionsv(3)** API function.
