

Name

mysql_row_seek - Positions the row cursor to an arbitrary row

Synopsis

```
#include <mysql.h>
```

```
MYSQL_ROW_OFFSET mysql_row_seek(MYSQL_RES * result,  
                                MYSQL_ROW_OFFSET offset);
```

Description

Positions the row cursor to an arbitrary row in a result set which was obtained by **mysql_store_result(3)**.

Parameter

- ⊕ result - a result set identifier returned by **mysql_store_result(3)**.
- ⊕ offset - row offset. This value can be obtained either by **mysql_row_seek()** or **mysql_row_tell(3)**

Notes

- ⊕ This function will not work if the result set was obtained by **mysql_use_result(3)**.

Return value

Returns the previous row offset.
