Name

   mysql_row_tell - Returns row offset of a result cursor

Synopsis

   #include <mysql.h>

   MYSQL_ROW_OFFSET mysql_row_tell(MYSQL_RES * res);

Description

   Returns the row offset of a result cursor. The returned offset value can be used to reposition the result
   cursor by calling **mysql_row_seek(3)**.

Parameter

   ⊕ res - a result set identifier returned by **mysql_store_result(3)**.

Notes

   ⊕ This function will not work if the result set was obtained by **mysql_use_result(3)**.
