

Name

mysql_server_init - Initializes library

Synopsis

```
#include <mysql.h>

int mysql_library_init(int argc __attribute__((unused)),
                      char **argv __attribute__((unused)),
                      char **groups __attribute__((unused)))
```

Description

Call to initialize the library before calling other functions.

Parameters

All parameters are unused, they only exist for compatibility reasons.

Notes

- ⊕ Call **mysql_server_end(3)** to clean up after completion.
- ⊕ If the library was not explicitly initialized by `mysql_server_init()` any call to **mysql_init(3)** will automatically initialize the library.
- ⊕ `mysql_library_init()` is an alias for `mysql_server_init()`

Return value

Returns zero for success, or nonzero if an error occurred. ## See also * **mysql_server_end(3)**
