

Name

mysql_stmt_error - Returns a string description for the last statement error

Synopsis

```
#include <mysql.h>

const char * mysql_stmt_error(MYSQL_STMT * stmt);
```

Description

Returns a string containing the error message for the most recently invoked statement function that can succeed or fail. The string will be empty if no error occurred.

Parameter

⊕ stmt - a statement handle, which was previously allocated by **mysql_stmt_init(3)**.

Return value

⊕ A string describing the last error or an empty string if no error occurred.

Notes

⊕ Client error messages are listed in the errmsg.h header file, server error messages are listed in the mysqld_error.h header file of the server source distribution.
