

**Name**

mysql\_stmt\_reset - Resets a prepared statement

**Synopsis**

```
#include <mysql.h>

my_bool mysql_stmt_reset(MYSQL_STMT * stmt);
```

**Description**

Resets a prepared statement on client and server to state after prepare.

**Parameter**

- ⊕ stmt - a statement handle, which was previously allocated by **mysql\_stmt\_init(3)**. Returns zero on success, nonzero if an error occurred.

**Return value**

Returns zero on success, 1 if an error occurred.

**Notes**

- ⊕ mysql\_stmt\_reset() resets the statement on the server, unbuffered result sets and errors. Bindings and stored result sets will not be cleared. The latter one will be cleared when re-executing or closing the prepared statement.
- ⊕ To reprepare a prepared statement with another SQL statement use **mysql\_stmt\_prepare(3)**.

**See Also**
