

**NAME**

ne\_xml\_create, ne\_xml\_destroy - create and destroy an XML parser

**SYNOPSIS**

```
#include <ne_xml.h>
```

```
ne_xml_parser *ne_xml_create(void);
```

```
void ne_xml_destroy(ne_xml_parser *parser);
```

**DESCRIPTION**

The **ne\_xml\_create** function creates an XML parser object, which can be used for parsing XML documents using stacked SAX handlers.

**RETURN VALUE**

**ne\_xml\_create** returns a pointer to an XML parser object, and never NULL
