

NAME

nfsdumpstate - display NFSv4 open/lock state

SYNOPSIS

nfsdumpstate [-o] [-l *filename*]

DESCRIPTION

nfsdumpstate displays open/lock state for the NFSv4 client and server in the experimental nfs subsystem.

The options are as follows:

- o** Displays a summary of Clients for NFSv4. Each line lists a Client with the ClientID being the last field of the line.

The following are the client flag values displayed:

NC	Needs Confirmation
CB	Callbacks are enabled
GSS	Using RPCSEC_GSS
REV	Administratively Revoked, via nfsrevoke(8)

-l *filename*

Displays a list of all NFSv4 Opens and Locks on the file specified by the *filename*. The ClientID is the last field of each line.

SEE ALSO

nfsv4(4), nfsrevoke(8)

HISTORY

The **nfsdumpstate** utility was introduced with the NFSv4 experimental subsystem in 2009.
