

**NAME**

ntlm\_type1 -

**SYNOPSIS**

```
#include <heimntlm.h>
```

**Data Fields**

```
uint32_t flags  
char * domain  
char * hostname  
uint32_t os [2]
```

**Detailed Description**

Struct for the NTLM type1 message info, the strings is assumed to be in UTF8. When filled in by the library it should be freed with **heim\_ntlm\_free\_type1()**.

**Examples:**

```
test_ntlm.c.
```

**Field Documentation**

```
uint32_t ntlm_type1::flags
```

**Examples:**

```
test_ntlm.c.
```

```
char* ntlm_type1::domain
```

**Examples:**

```
test_ntlm.c.
```

```
char* ntlm_type1::hostname
```

**Examples:**

```
test_ntlm.c.
```

```
uint32_t ntlm_type1::os[2]
```

**Examples:**

```
test_ntlm.c.
```
