

NAME

oLschema2ldif - Converts LDAP schema's to LDB-compatible LDIF

SYNOPSIS

oLschema2ldif [-I INPUT-FILE] [-O OUTPUT-FILE]

DESCRIPTION

oLschema2ldif is a simple tool that converts standard OpenLDAP schema files to a LDIF format that is understood by LDB.

OPTIONS

-I input-file

OpenLDAP schema to read. If none are specified, the schema file will be read from standard input.

-O output-file

File to write ldif version of schema to.

VERSION

This man page is correct for version 4.0 of the Samba suite.

SEE ALSO

ldb(7), ldbmodify, ldbdel, ldif(5)
