NAME

pcap_datalink_name_to_val - get the link-layer header type value corresponding to a header type name

SYNOPSIS

#include <pcap/pcap.h>

int pcap_datalink_name_to_val(const char *name);

DESCRIPTION

pcap_datalink_name_to_val() translates a link-layer header type name, which is a **DLT_** name with the **DLT_** removed, to the corresponding link-layer header type value. The translation is case-insensitive.

RETURN VALUE

pcap_datalink_name_to_val() returns the type value on success and **PCAP_ERROR** if the name is not a known type name.
