

NAME

`pcap_dump` - write a packet to a capture file

SYNOPSIS

```
#include <pcap/pcap.h>
```

```
void pcap_dump(u_char *user, struct pcap_pkthdr *h,  
u_char *sp);
```

DESCRIPTION

`pcap_dump()` outputs a packet to the “savefile” opened with `pcap_dump_open(3)`. Note that its calling arguments are suitable for use with `pcap_dispatch(3)` or `pcap_loop(3)`. If called directly, the *user* parameter is of type `pcap_dumper_t` as returned by `pcap_dump_open()`.

SEE ALSO

`pcap(3)`
