NAME

    pcap_strerror - convert an errno value to a string

SYNOPSIS

    #include <pcap/pcap.h>

    const char *pcap_strerror(int error);

DESCRIPTION

    This function returns an error message string corresponding to *error*. It uses either **strerror**(3) or its thread-safe variant if one is available, which currently is the case in every supported OS.

BACKWARD COMPATIBILITY

    This function was not thread-safe in libpcap before 1.8.1 on Windows and in libpcap before 1.10.5 on all other OSes.

SEE ALSO

    pcap(3)
