NAME

PCRE2 - Perl-compatible regular expressions (revised API)

SYNOPSIS

#include <pcre2.h>

void pcre2_jit_stack_free(pcre2_jit_stack **jit_stack***);**

DESCRIPTION

This function is used to free a JIT stack that was created by **pcre2_jit_stack_create()** when it is no longer needed. If the argument is NULL, the function returns immediately without doing anything. For more details, see the **pcre2jit** page.

There is a complete description of the PCRE2 native API in the **pcre2api** page and a description of the POSIX API in the **pcre2posix** page.
