NAME

PCRE2 - Perl-compatible regular expressions (revised API)

SYNOPSIS

#include <pcre2.h>

DESCRIPTION

This function discards a set of character tables that were created by a call to pcre2_maketables().

The *gcontext* parameter should match what was used in that call to account for any custom allocators that might be in use; if it is NULL the system **free**() is used.

There is a complete description of the PCRE2 native API in the pcre2api page.
