

NAME

PCRE2 - Perl-compatible regular expressions (revised API)

SYNOPSIS

```
#include <pcre2.h>
```

```
pcre2_match_context *pcre2_match_context_copy(  
pcre2_match_context *mcontext);
```

DESCRIPTION

This function makes a new copy of a match context, using the memory allocation function that was used for the original context. The result is NULL if the memory cannot be obtained.

There is a complete description of the PCRE2 native API in the **pcre2api** page and a description of the POSIX API in the **pcre2posix** page.
