NAME
   pos_form_cursor - position a form window cursor

SYNOPSIS
   #include <form.h>

   int pos_form_cursor(FORM *_form_);

DESCRIPTION
   The function **pos_form_cursor** restores the cursor to the position required for the forms driver to
   continue processing requests. This is useful after **curses** routines have been called to do screen-
   painting in response to a form operation.

RETURN VALUE
   This routine returns one of the following:

   E_OK
         The routine succeeded.

   E_BAD_ARGUMENT
         Routine detected an incorrect or out-of-range argument.

   E_NOT_POSTED
         The form has not been posted.

   E_SYSTEM_ERROR
         System error occurred (see **errno**(3)).

SEE ALSO
   curses(3X), **form**(3X).

NOTES
   The header file **<form.h>** automatically includes the header file **<curses.h>**.

PORTABILITY
   These routines emulate the System V forms library. They were not supported on Version 7 or BSD
   versions.

AUTHORS
   Juergen Pfeifer. Manual pages and adaptation for new curses by Eric S. Raymond.
