

NAME

`psresize` - multiple pages per sheet

SYNOPSIS

`psresize [-wwidth] [-hheight] [-ppaper] [-Wwidth] [-Hheight] [-Ppaper] [-q] [infile [outfile]]`

DESCRIPTION

Psresize rescales and centres a document on a different size of paper. The input PostScript file should follow the Adobe Document Structuring Conventions.

The `-w` option gives the output paper width, and the `-h` option gives the output paper height, normally specified in **cm** or **in** to convert PostScript's points (1/72 of an inch) to centimeters or inches. The `-p` option can be used as an alternative, to set the output paper size to **a3**, **a4**, **a5**, **b5**, **letter**, **legal**, **tabloid**, **statement**, **executive**, **folio**, **quarto** or **10x14**. The default output paper size is **a4**.

The `-W` option gives the input paper width, and the `-H` option gives the input paper height. The `-P` option can be used as an alternative, to set the input paper size. The default input paper size is **a4**.

Psresize normally prints the page numbers of the pages output; the `-q` option suppresses this.

EXAMPLES

The following command can be used to convert a document on A4 size paper to letter size paper:

```
psresize -PA4 -pletter in.ps out.ps
```
