

NAME

pthread_main_np - identify the initial thread

LIBRARY

POSIX Threads Library (libpthread, -lpthread)

SYNOPSIS

```
#include <pthread_np.h>
```

int

```
pthread_main_np(void);
```

DESCRIPTION

The **pthread_main_np()** function is used in userland threads environment to identify the initial thread. Its semantics is similar to the Solaris's **thr_main()** function.

RETURN VALUES

The **pthread_main_np()** function returns 1 if the calling thread is the initial thread, 0 if the calling thread is not the initial thread, and -1 if the thread's initialization has not yet completed.

SEE ALSO

pthread_create(3), pthread_equal(3), pthread_np(3), pthread_self(3)
