

NAME

pw-jack - Use PipeWire instead of JACK

SYNOPSIS

pw-jack [*options*] *COMMAND* [*FILE*]

DESCRIPTION

pw-jack modifies the **LD_LIBRARY_PATH** environment variable so that applications will load PipeWire's reimplementation of the JACK client libraries instead of JACK's own libraries. This results in JACK clients being redirected to PipeWire.

If PipeWire's reimplementation of the JACK client libraries has been installed as a system-wide replacement for JACK's own libraries, then the whole system already behaves in that way, in which case **pw-jack** has no practical effect.

OPTIONS

-h Show help.

-r *NAME*

The name of the remote instance to connect to. If left unspecified, a connection is made to the default PipeWire instance.

-v Verbose operation.

EXAMPLES

pw-jack sndfile-jackplay /usr/share/sounds/freedesktop/stereo/bell.oga

NOTES

Using PipeWire for audio is currently considered to be experimental.
