

**NAME**

`rdma_get_src_port` - Returns the local port number of a bound `rdma_cm_id`.

**SYNOPSIS**

```
#include <rdma/rdma_cma.h>
```

```
uint16_t rdma_get_src_port (struct rdma_cm_id *id);
```

**ARGUMENTS**

`id`           RDMA identifier.

**DESCRIPTION**

Returns the local port number for an `rdma_cm_id` that has been bound to a local address.

**RETURN VALUE**

Returns the 16-bit port identifier associated with the local endpoint. If the `rdma_cm_id` is not bound to a port, the returned value is 0.
