

**NAME**

**regdomain.xml** - 802.11 wireless regulatory definitions

**DESCRIPTION**

The **regdomain.xml** file describes regulations for the operation of IEEE 802.11 wireless radios.

This information is used by the `ifconfig(8)` program to construct regulatory state for download to the system. This file should be changed only to reflect changes in regulations.

**FILES**

*/etc/regdomain.xml* XML database of 802.11 regulatory constraints

**SEE ALSO**
