

**NAME**

router - XML packet distributor

**SYNOPSIS**

**router** [-h] [-c *config*] [-D]

**DESCRIPTION**

**router** is the core component of the jabberd system. It passes XML packets between the components, and manages the entry and exit of components onto the network.

**OPTIONS**

- h Show summary of options.
- c Alternate configuration file to use. The compiled-in default is /usr/local/etc/jabberd/router.xml.
- D Print debugging output. You should configure jabberd with the --enable-debug switch to enable this.
