

NAME

rpc - rpc program number data base

SYNOPSIS

/etc/rpc

DESCRIPTION

The **rpc** file contains user readable names that can be used in place of RPC program numbers. For each RPC program a single line should be present with the following information:

1. name of the RPC program
2. RPC program number
3. aliases

Items are separated by any number of blanks and/or tab characters. A hash ("#") indicates the beginning of a comment; characters up to the end of the line are not interpreted by routines which search the file.

FILES

/etc/nsswitch.conf

EXAMPLES

Below is an example of an RPC database:

```
#
#      rpc
#
rpcbind      100000  portmap  sunrpc portmapper
rusersd      100002  rusers
nfs          100003  nfsprog
mountd       100005  mount   showmount
walld        100008  rwall   shutdown
sprayd       100012  spray
llockmgr 100020
nlockmgr 100021
status       100024
bootparam    100026
keyserver    100029  keyserver
```
