

NAME

sasl_auxprop_getctx - Cyrus SASL documentation

SYNOPSIS

```
#include <sasl/sasl.h>
```

```
int sasl_auxprop_getctx(sasl_conn_t *conn)
```

DESCRIPTION

```
int sasl_auxprop_getctx(sasl_conn_t *conn)
```

Fetches an auxiliary property context for the connection on which the functions described in sasl_auxprop(3) can operate.

Parameters

⊕ **conn** - pointer to the *sasl_conn_t* for which the request is being made.

Returns

A pointer to the context on success. Returns NULL on failure.

```
type sasl_conn_t
```

Context for a SASL connection negotiation

CONFORMING TO

RFC 4422
