

NAME

sasl_log_t - Cyrus SASL documentation

SYNOPSIS

```
#include <sasl/sasl.h>
```

```
int sasl_log_t(void *context,  
              int level,  
              const char * message);
```

DESCRIPTION

```
int sasl_log_t(void *context,  
  
int level,  
  
const char * message);
```

sasl_log_t is used to log warning/error messages from the SASL library. If not specified **syslog** will be used.

RETURN VALUE

SASL callback functions should return SASL return codes. See sasl.h for a complete list. **SASL_OK** indicates success.
