

**NAME**

**setfmac** - set MAC label for a file system object

**SYNOPSIS**

**setfmac** [-**hqR**] *label file ...*

**DESCRIPTION**

The **setfmac** utility assigns the specified MAC label to the specified files. The following options are available:

- R** Set the labels on the file hierarchies rooted in the files instead of just the files themselves.
- h** If the file is a symbolic link, change the label of the link rather than the file that the link points to.
- q** Do not print non-fatal warnings during execution.
