NAME

speexdec - The reference implementation speex decoder.

SYNOPSIS

speexdec [*options*] *input_file.spx* [*output_file*]

DESCRIPTION

Decodes a Speex file and produce a WAV file or raw file

input_file can be:

filename.spx
>   regular Speex file

- stdin

output_file can be:

filename.wav
>   Wav file

filename.*
>   Raw PCM file (any extension other that .wav)

- stdout

(nothing)
>   Will be played to soundcard

OPTIONS

--enh
>   Enable perceptual enhancement (default)

--no-enh
>   Disable perceptual enhancement

--force-nb
>   Force decoding in narrowband

--force-wb
>   Force decoding in wideband

--force-uwb
>   Force decoding in ultra-wideband

--mono
>   Force decoding in mono

--stereo
>   Force decoding in stereo

--rate n
>   Force decoding at sampling rate n Hz

--packet-loss n
>   Simulate n % random packet loss

-V   Verbose mode (show bit-rate)

-h, **--help**
>   This help

-v, **--version**
>   Version information

--pf Deprecated, use **--enh** instead

--no-pf
>   Deprecated, use **--no-enh** instead
