

NAME

ssh-pkcs11-helper - OpenSSH helper for PKCS#11 support

SYNOPSIS

ssh-pkcs11-helper [-v]

DESCRIPTION

ssh-pkcs11-helper is used by `ssh(1)`, `ssh-agent(1)`, and `ssh-keygen(1)` to access keys provided by a PKCS#11 token.

ssh-pkcs11-helper is not intended to be invoked directly by the user.

A single option is supported:

- v** Verbose mode. Causes **ssh-pkcs11-helper** to print debugging messages about its progress. This is helpful in debugging problems. Multiple **-v** options increase the verbosity. The maximum is 3.

Note that `ssh(1)`, `ssh-agent(1)`, and `ssh-keygen(1)` will automatically pass the **-v** flag to **ssh-pkcs11-helper** when they have themselves been placed in debug mode.

SEE ALSO

`ssh(1)`, `ssh-agent(1)`, `ssh-keygen(1)`

HISTORY

ssh-pkcs11-helper first appeared in OpenBSD 4.7.
