NAME

tiffsplit - split a multi-image TIFF into single-image TIFF files

SYNOPSIS

tiffsplit *src.tif* [*prefix*]

DESCRIPTION

tiffsplit takes a multi-directory (page) TIFF file and creates one or more single-directory (page) TIFF files from it. The output files are given names created by concatenating a prefix, a lexically ordered suffix in the range [aaa--zzz], the suffix **.tif** (e.g. **xaaa.tif**, **xaab.tif**, **<?>**, **xzzz.tif**). If a prefix is not specified on the command line, the default prefix of **x** is used.

OPTIONS

None.

EXIT STATUS

tiffsplit exits with one of the following values:

0:

Success

1:

An error occurred either reading the input or writing results.

BUGS

Only a select set of "known tags" are copied when splitting.
