NAME

tld_get_z - API function

SYNOPSIS

#include <tld.h>

int tld_get_z(const char * *in*, char ** *out*);

ARGUMENTS

const char * in

Zero terminated character array to process.

char ** out   Zero terminated ascii result string pointer.

DESCRIPTION

Isolate the top-level domain of *in* and return it as an ASCII string in *out* . The input string *in* may be UTF-8, ISO-8859-1 or any ASCII compatible character encoding.

Return value: Return **TLD_SUCCESS** on success, or the corresponding **Tld_rc** error code otherwise.
