

NAME

unw_strerror -- get text corresponding to error code

SYNOPSIS

```
#include <libunwind.h>
```

```
const char * unw_strerror(int err_code);
```

DESCRIPTION

The `unw_strerror()` routine maps the (negative) `err_code` to a corresponding text message and returns it.

RETURN VALUE

The message that corresponds to `err_code` or, if the `err_code` has no corresponding message, the text "invalid error code".

THREAD AND SIGNAL SAFETY

`unw_strerror()` is thread-safe as well as safe to use from a signal handler.
