NAME
vfs_unbusy - unbusy a mount point

SYNOPSIS
#include <sys/param.h>
#include <sys/mount.h>

void
vfs_unbusy(*struct mount *mp*);

DESCRIPTION
The **vfs_unbusy**() function un-busies a mount point by decrementing the reference count of a mount point. The reference count is typically incremented by calling vfs_busy(9) prior to this call.

Its arguments are:

mp The mount point to unbusy.

SEE ALSO
vfs_busy(9)
