NAME

wlan_acl - MAC-based ACL support for 802.11 devices

SYNOPSIS

device wlan_acl

DESCRIPTION

The **wlan_acl** module implements a MAC-based access control plugin for use with 802.11 devices operating as an access point. The **wlan_acl** must be loaded for ifconfig(8) to handle the **mac:*** requests.

SEE ALSO

wlan(4), ifconfig(8)

STANDARDS

More information can be found in the IEEE 802.11 Standard.

HISTORY

The **wlan_acl** driver first appeared in FreeBSD 6.0.
