

**NAME**

xcb\_get\_font\_path -

**SYNOPSIS**

```
#include <xcb/xproto.h>
```

**Request function**

```
xcb_get_font_path_cookie_t xcb_get_font_path(xcb_connection_t *conn,
```

**Reply datastructure**

```
typedef struct xcb_get_font_path_reply_t {
    uint8_t response_type;
    uint8_t pad0;
    uint16_t sequence;
    uint32_t length;
    uint16_t path_len;
    uint8_t pad1[22];
} xcb_get_font_path_reply_t;
```

**Reply function**

```
xcb_get_font_path_reply_t *xcb_get_font_path_reply(xcb_connection_t *conn,
    xcb_get_font_path_cookie_t cookie, xcb_generic_error_t **e);
```

**Reply accessors**

```
int xcb_get_font_path_path_length(const xcb_get_font_path_reply_t *reply);
```

```
xcb_str_iterator_t xcb_get_font_path_path_iterator(const xcb_get_font_path_reply_t *reply);
```

**REQUEST ARGUMENTS**

*conn*           The XCB connection to X11.

**REPLY FIELDS**

*response\_type*   The type of this reply, in this case *XCB\_GET\_FONT\_PATH*. This field is also present in the *xcb\_generic\_reply\_t* and can be used to tell replies apart from each other.

*sequence*        The sequence number of the last request processed by the X11 server.

*length*          The length of the reply, in words (a word is 4 bytes).

*path\_len*      TODO: NOT YET DOCUMENTED.

## DESCRIPTION

## RETURN VALUE

Returns an *xcb\_get\_font\_path\_cookie\_t*. Errors have to be handled when calling the reply function *xcb\_get\_font\_path\_reply*.

If you want to handle errors in the event loop instead, use *xcb\_get\_font\_path\_unchecked*. See **xcb-requests(3)** for details.

## ERRORS

This request does never generate any errors.
